

# Data verification log file

**Hospital name:** Hypothetical Hospital

**Country name:** Hypothetical Country

**Data from:**

**01 Jan 2016 to 31 Dec 2016**

This report is for users to review variable names and data values used by microbiology data file and hospital admission data file saved within the same folder as the application file (AMASS.bat). This report can be used to assist users while completing the data dictionaries for both data files.

**Generated on:** 16 Jul 2025 09:38:35

**Software version:** 3.1 released on 16 Jul 2025

## Data verification log file

Please review the following information carefully before interpreting the AMR surveillance report generated by AMASS application.

The microbiology data file (stored in the same folder as the application file) had:

**50414** records with collection dates ranging from **01 Jan 2016** to **31 Dec 2016**

Collection date are in multiple formats.

**YMD** format. Example : **2016-11-10 00:00:00, 2016-11-10 00:00:00, 2016-11-10 00:00:00**

**others defined** format. Example : **05feb2016, 22feb2016, 03oct2016**

Microbiology data's hospital number are from **1** to **9** charecter lengths. The following are most common lengths.

**6** charecters long : **91.82% (46290/50414)**

**3** charecters long : **3.25% (1639/50414)**

**4** charecters long : **2.62% (1321/50414)**

Missing data.

**0** records are missing or unknown format of collection date.

**0** records are wrong date or wrong date format of collection date.

**0** records are missing specimen type.

**0** records are missing culture result.

The hospital admission data file (stored in the same folder as the application file) had:

**60117** records with admission dates ranging from **01 Jan 2016** to **31 Dec 2016**

Admission date are in **others** format. Example : **16sep2016, 17mar2016, 10nov2016**

Discharge date are in **others** format. Example : **13jun2016, 29mar2016, 20apr2016**

hospital admission data's hospital number are from **1** to **7** character lengths. The following are most common lengths.

**6** characters long : **76.99% (46287/60117)**

**7** characters long : **17.74% (10665/60117)**

**3** characters long : **2.72% (1634/60117)**

Missing data.

**0** records are missing or unknown format of admission date.

**0** records are missing or unknown format of discharge date.

**0** records are wrong date or wrong date format of admission date.

**0** records are wrong date or wrong date format of discharge date

**0** records are missing outcome.

**0** records are missing age.

**0** records are missing gender.

The merged data set between microbiology data and hospital admission data had:

Microbiology data records unable to merged with hospital admission data records.

**944** records are unable to merge due to no hospital number found in hospital admission data.

**367** records are unable to merge due to have hospital number found in hospital admission data but collection date not in admission period.

Merged data.

**49103** records are merged (All specimen type).

**14833** records are merged (Only blood specimen).

**13975** records are merged (Only BSI specimen).

**Table S1A: List of data values of the variable recorded for "organism" in your microbiology data file, which are mainly used for the main report**

Data values of variable "organism" in AMASS, which are mainly used for the main report	Data values of variable recorded for "organism" in your microbiology data file	Number of observations

**Table S3: List of variables recorded for "antibiotics" in your microbiology data file**

Variable names used for "antibiotics" described in AMASS	Variable names recorded for "antibiotics" in your microbiology data file	Number of observations containing S, I, or R for each antibiotic	Number of observations containing some data (i.e. not blank) which were not translated into S, I or R*
Amikacin	AK	100	0
Amoxicillin	AMX	100	0
Ampicillin	AP	846	0
Cefepime	FEP	224	0
Cefotaxime	CTX	986	0
Cefoxitin	FOX	415	0
Cefpodoxime	CPD	0	0
Ceftazidime	CAZ	1292	0
Ceftriaxone	CRO	1439	0
Ciprofloxacin	CFX	1542	0
Clindamycin	DA	486	0
Colistin	CL	0	0
Daptomycin	DAP	0	0
Doripenem	DOR	3	0
Ertapenem	ETP	1303	0
Erythromycin	E	71	0
Gentamicin	GM	2018	0
Imipenem	IPM	1918	0
Levofloxacin	LVX	0	0
Linezolid	LNZ	21	0
Meropenem	MEM	1419	0
Minocycline	MI	0	0
Oxacillin	OX	0	0
Penicillin_G	PG	60	0
Piperacillin_and_tazobactam	TZP	29	0
Sulfamethoxazole_and_trimethoprim	SXT	1372	0
Teicoplanin	TCO	0	0
Tigecycline	TGC	440	0
Vancomycin	VAN	578	0
	department	4124	

\* For antibiotics used for the AST, the numbers in this column should be 0. This is because there should be no data that is not translated into S, I or R. This may occur when laboratories record some number into the same column (e.g. a mix of S I R and zone size) or when dictionary is still incomplete (e.g. recording "R" and "R - no zone" but having only "R" in the dictionary); NA=Not applicable. This could occur when the variable names for antibiotics are not used in AMASS.

**Table S3 (continue): List of variables recorded for "antibiotics" in your microbiology data file**

Variable names used for "antibiotics" described in AMASS	Variable names recorded for "antibiotics" in your microbiology data file	Number of observations containing S, I, or R for each antibiotic	Number of observations containing some data (i.e. not blank) which were not translated into S, I or R*
	department	4124	

\* For antibiotics used for the AST, the numbers in this column should be 0. This is because there should be no data that is not translated into S, I or R. This may occur when laboratories record some number into the same column (e.g. a mix of S I R and zone size) or when dictionary is still incomplete (e.g. recording "R" and "R - no zone" but having only "R" in the dictionary); NA=Not applicable. This could occur when the variable names for antibiotics are not used in AMASS.

**Table S4: List of data values of variable recorded for "gender" in your hospital admission data file**

<b>Data values of variable used for "gender" described in AMASS</b>	<b>Data values of variable recorded for "gender" in your hospital admission data file</b>	<b>Number of observations</b>
male	M	28570
female	F	28548
		2999

**Table S5: List of data values of variable recorded for "age" in your hospital admission data file**

Data values of variable used for "age" described in AMASS	Data values of variable recorded for "age" in your hospital admission data file	Number of observations
Less than 1 year	0	327
1 to 4 years	1	746
1 to 4 years	2	706
1 to 4 years	3	735
1 to 4 years	4	687
5 to 14 years	5	740
5 to 14 years	6	648
5 to 14 years	7	727
5 to 14 years	8	676
5 to 14 years	9	744
5 to 14 years	10	693
5 to 14 years	11	705
5 to 14 years	12	737
